## **DETAILED ACTION**

### ***Specification***

1. The disclosure is objected to because of the following informalities: The blanks on page 13, lines 21 and 22, must be replaced by the application number and date.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:  
  
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1-4, 9-12, and 17-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. Claims 1, 3, 9, 11, and 17 recite the limitation "said decryption operation". There is insufficient antecedent basis for this limitation in the claims.
5. Claim 19 recites the limitation "said encryption operation". There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being anticipated by Newton in Encyclopedia of Cryptology.

With regard to claims 1-24, Newton discloses loading into memory a plurality of keys simultaneously to decrypting the previous data frame (page 223, section labeled "priming key"). Newton discloses using the previously decrypted letter as a key to decrypt the next letter, thus the key is loaded while decrypting the previous data frame (letter). Newton does not disclose using this method on a computer system. The examiner takes official notice that encryption algorithms are commonly used on computer systems to speed up the encryption of large amounts of data. It would have been obvious to one of ordinary skill in the art to implement Newton's algorithm on a computer to speed up the encryption of large amounts of data.
